- The bit in the first octate of j/p get spread into the 8 bits of each of the octates.
- The bits in the record octate of the j/p gets spread into the 1^{th} bit of the octate.
- In general the bits of the j^{th} octate get spread into the $(8-j+1)^{th}$ of the octate.
- The pattern of the spreading of the 8^{th} bit in octate ' j ' of the j/p among the 8 octate is that even no. of bits go into octate 1 to 4.

and odd no. bits go into octate 5 to 8.
